Beskrivelse av tillegg

1. Sylinder, eksteriør endring

Exterior changes to the R 95 cylinder

The cylinder of the R95 engine is made in cooperation with Mahle and it is made some exterior changes to fit other applications than karting.

The changes are only exterior and do not affect the performance at all. There is no changes inside ports at all.

The cylinder is marked with the same part number as before (# 35085) since there is no differences than the exterior. It is considered the same product from our side.

The new cylinder is available now from stock and will be mounted in production from now on.
